Why are CEOs best for business

Team Tsang walk their boss into a PR debacle

Creating eco-jobs is Asia’s best hope for dealing with climate change and rising unemployment, writes Janet Pau

Real green shoots

The mass media and even the financial press seem to have developed a real case of green fatigue. They appear to be tired of mentioning the word green. They are no longer interested in hearing about green shoots. The media has always liked to report on green shoots, especially if they are growing. But the green shoots are not there anymore. The green shoots are dead. They have died. They are not growing any more. They are not even a memory. They have been replaced by the green jobs.

China has the most favourable conditions [in Asia] for overall green job creation, followed by Japan and India

Sustainability is the way to prosperity

Sustainability is the way to prosperity

China has the most favorable conditions for overall green job creation, followed by Japan and India

The obstacles are daunting. Over the three years to five years, Asian exporters still need to address the fundamental economic challenges they face, such as the need to redefine their competitive advantage and reposition their industries. Many fear that China’s manufacturing employment growth has slowed, and this may continue as Chinese workers appear to be becoming more expensive. Capital- and labor-intensive industries have seen a slow employment decline. In manufacturing, the growth rate in the 1990s was just a 2-3 percent annual growth rate. By the end of the 20th century, a growth rate of almost five percent was needed to get the same percent increase in employment. In the first half of the 21st century, a growth rate of 7-8 percent was needed. Although hopes in the past few years have been high, the reality has fallen short.

New growth needs to stimulate consumption, generate decent jobs for the workforce, and provide higher added value to the goods we export. China needs to find new ways to make its green jobs more attractive and to encourage people to enter the green job market.

China possesses the most favourable conditions for overall green job creation, and it is followed by Japan and India. In the green jobs market, China is more developed and advanced than South and Southeast Asia. Economies facing aging populations – including China, still will need to employ workers in new, higher-added value jobs to create the effective, stable, or shrinking workforce. The green shoots of China’s employment growth have been fuelled by the fact that China’s green job market is more developed and advanced than South and Southeast Asia.

China’s green job creation has the potential of green industry development and the potential of green industry growth. China is the world’s largest investor in the green industries sector. Recently, China has led green job creation, and China’s green job market has shown indigenous and national environmental performance. The potential of green industry development and the potential of green industry growth in China are the same. The green shoots of China’s employment growth have been fuelled by the fact that China’s green job market is more developed and advanced than South and Southeast Asia.

It is reasonable to assume the matter had been discussed, but a response was included in his brief

President, in an interview with Frank Ching in December, said that the government had been "totally made up" on China’s attitude on the spy allegations. He added that it was "totally made up" on the Chinese intelligence agency.
